Canning Estuary and Lower Canning River - Water Quality Profiles – 27 May 2025

Date: 27 May 2025

Weather & tide conditions: Conditions were clear with a predominately easterly breeze of up to 8.5 knots. The predicted tides at Barrack St were 1.37 m at 10:54 am (high tide) and 0.66 m at 9:50 pm (low tide). Perth recorded 32.4 mm of rainfall in the week prior to sampling (Bureau of Meteorology).

Oxygenation: The Bacon St oxygenation plant and the Nicholson Rd oxygenation plant were triggered to provide oxygen in the 24 hours prior to sampling.

Canning Estuary (SCB2 to CASMID): The Canning Estuary was saline over hypersaline at SCB2, saline at SAL and brackish over saline at RIV and CASMID. Waters were oxygenated or well oxygenated, except for bottom waters at CASMID which were hypoxic. Chlorophyll fluorescence was low and water temperatures ranged from 14.6 to 17.8 °C at the time of sampling.

Lower Canning River (KEN to ELL): The Lower Canning River was fresh, waters were oxygenated or well oxygenated and chlorophyll fluorescence was low. Water temperatures ranged from 13.8 to 14.7 °C at the time of sampling.

NB: Profile plots are visual interpolations of measured parameters only. Detailed data are available at wir.water.wa.gov.au.

Oxygenation Plant Operational Status:

- ▲ Operating for part or all of the 24 hours prior to sampling
- ▲ Operable but not triggered to operate in the 24 hours prior to sampling
- ▲ Inoperable for part or all of the 24 hours prior to sampling

Definitions:

Salinity – fresh <5, brackish 5-25, saline 25-35, hypersaline >35

Dissolved oxygen – well oxygenated >6 mg L⁻¹, oxygenated >4-6 mg L⁻¹, low oxygen >2-4 mg L⁻¹, hypoxic 0.5-2 mg L⁻¹, anoxic <0.5 mg L⁻¹

Chlorophyll fluorescence (low flow): low < 50 µg L⁻¹, moderate 50-150 µg L⁻¹, high 150-400 µg L⁻¹, extreme > 400 µg L⁻¹
