FEM079

#### **PART A: DISTURBANCE ACTIVITY**

The decision tree below will help determine if the activity constitutes a disturbance and requires a risk assessment (Part B), and the risk assessment will determine if a DMP is required (Part C).

#### Details of disturbance activity

Region/District of activity:	Date of activity: (give date range if a prolonged activity)			
Location of site of activity: (Forest Block, Reserve or coordinates)	Disease Risk Area: (yes or no)			
Vegetation type/complex:				
Description of the activity: (timber harvesting, road upgrade etc.)				
Proponent of the activity: (DBCA, FPC, MRWA, Water Corp. etc.)				
Departmental objective for dieback management:	To minimise the potential for the introduction or spread of dieback associated with planned disturbance activities.			

Indicate what parts of the form have been completed for the activity described above:

Part	Purpose	Requirement	Tick parts completed	
В	Risk Assessment	To be completed if decision tree in Part A indicates that intentional or unintentional soil movement will occur during the activity.		
С	DMP	To be completed if risk is assessed in Part B to be 'High' or 'Moderate'		
		Dieback Management Plan No.  Allocated by District		

FEM079

#### **PART B: RISK ASSESSMENT**

#### Step 1: MOISTURE conditions

Higher moisture during a disturbance activity increases the likelihood that soil will stick to a carrier (e.g. vehicles, equipment and/or footwear). Tick the box adjacent to the moisture conditions that are forecast for the period of the activity. If the activity will continue for an extended period, planning should consider the highest possible risk (wettest) conditions that may occur. If the activity is planned for dry conditions but the conditions change to become wetter prior to or during the activity, a contingency plan is required.

Dry soil	where dust forms when exposed soil is disturbed	
Moist soil	where soil is damp but does not stick to tyres, equipment and/or footwear	
Wet soil	where soil and moisture combine so that soil sticks to tyres, equipment and/or footwear	

#### **Step 2:** Determine the LIKELIHOOD of introducing or spreading dieback

Circle the description in each column that best describes the activity. An activity may fit between descriptions, in which case write a description into the appropriate blank cell.

The overall likelihood rating is determined by the criteria with the highest rating.

Disturbance type (e.g. action)	Introduction of raw material	Access	Complexity of activity	Extent of activity	Duration of activity	Drainage	Unmanaged access	Likelihood rating
Heavy earth moving, tracked vehicles	Infested or unknown raw material	Access crosses water (irrespective of frequency)			Activity area disturbed & map expired so impossible to revalidate boundaries		Increased public access in area of high public use	Very likely
Soil disturbance over a distance		Activity requires frequent access to site	Highly complex	Vehicle traverses several mini- catchments	Activity extends over several wet seasons	Surface water increased		Likely
Soil disturbance at single points	Crushed rock with no organic fraction		Complex		Activity occurs during a single wet season		Increased public access, but access restricted and/or site remote	Possible
Rubber tyred vehicle, bicycle	'High confidence' uninfested raw material	Activity requires infrequent access to site		Single minicatchment	Entry in short timeframe under dry conditions	Minimal increase in surface water		Unlikely
Human, animal traffic			Not complex	Point or human traffic	Single entry in short timeframe under dry conditions		Activity does not alter frequency of access to site	Very unlikely

**FEM079** 

### Step 3: Determine the CONSEQUENCE of introducing or spreading dieback

Determine the potential CONSEQUENCE that introducing or spreading dieback may cause by going through the table below systematically and circling the description in each column that best estimates the consequence.

The overall consequence rating is determined by the criteria with the highest rating.

Area put at risk	Predicted impact	Biodiversity and sensitive areas at risk	Consequence rating
Ongoing potential <sup>1</sup> to completely infest all protectable areas in activity landscape unit <sup>2</sup>	Predicted <b>very high</b> impact: (majority of species at the activity area are susceptible and/or introducing dieback will result in extinction of species or populations) <b>or</b> Wet areas which contain any <i>Banksia</i> species or jarrah	>1 threatened/priority plant or animal species, critical habitat, TEC and/or Ramsar wetlands that is susceptible to dieback and/or Old-growth jarrah forest	Severe
Potential to infest all protectable areas in activity landscape unit <sup>1</sup>	Predicted <b>high</b> impact: (many susceptible species and/or introducing the pathogen will result in loss of populations or localised extinction of species)  or  Where predicted impact cannot be determined, jarrah forest on upland areas	At least one threatened/priority plant or animal species, critical habitat, TEC and/or Ramsar wetlands that is susceptible to dieback and/or Sensitive neighbouring property	Significant
Potential to infest more than 5% of any protectable area or 4 ha's (whichever is greater – assessor may set a lower minimum protectable area where appropriate)	Predicted <b>moderate</b> impact: (moderate numbers of susceptible species and/or introducing the pathogen will result in a reduction in species/populations)		Intermediate
	Predicted <b>low</b> impact (low numbers of susceptible species)	Fauna Habitat Zones	Minor
No protectable areas estimated within any related landscape unit   and/or  The area is already infested <sup>3</sup>	No susceptible species and/or the activity area is in the 'excluded' category.  or  Introducing dieback will have no impact discernible outside natural variation <sup>3</sup>	No threatened/priority plant or animal species; critical habitat; TEC; and/or Ramsar wetlands that are susceptible to dieback.  Or  As the activity area is already infested there will be no increased risk to threatened species and communities present <sup>3</sup>	Insignificant

Ongoing potential for an area to become infested occurs when the disturbance activity involves construction of permanent infrastructure e.g. roads or camp sites especially high in the landscape

<sup>&</sup>lt;sup>2</sup> Landscape unit is an area bounded by features such as creeks, ridges, saddles, open roads and/or freehold land

<sup>&</sup>lt;sup>3</sup> Provide a map showing evidence that area is infested and attach to the risk assessment

FEM079

#### Step 4: Determine the overall dieback RISK rating

- a) Refer to the table below that corresponds to the soil MOISTURE conditions (Step 1)
- b) Circle where the LIKELIHOOD rating (Step 2) intersects the CONSEQUENCE rating (Step 3)

This is the overall dieback RISK rating for the activity.

DRY SOIL								
	Disturbance		CONSEQUENCE					
LIKELIHOOD	examples	Insignificant	Minor Intermediate		Significant	Severe		
Very likely	tracked machines ripping, pushing soil	Low	Moderate	High	High	High		
Likely	snigging/light surface skim over distance	Low	Moderate	Moderate	High	High		
Possible	installing posts, exploration drilling	Low	Low	Moderate	Moderate	High		
Unlikely	driving with rubber tyres	Low	Low	Low	Moderate	Moderate		
Very unlikely	walking	Low	Low	Low	Low	Low		

MOIST SOIL								
	Disturbance		CONSEQUENCE					
LIKELIHOOD	examples	Insignificant	Minor	Intermediate	Significant	Severe		
Very likely	tracked machines ripping, pushing soil	Low	High	High	High	High		
Likely	snigging/light surface skim over distance	Low	Moderate	High	High	High		
Possible	installing posts, exploration drilling	Low	Moderate	Moderate	High	High		
Unlikely	driving with rubber tyres	Low	Low	Low	Moderate	High		
Very unlikely	walking	Low	Low	Low	Moderate	Moderate		

WET SOIL									
	Disturbance		CONSEQUENCE						
LIKELIHOOD	examples	Insignificant	Minor	Intermediate	Significant	Severe			
Very likely	tracked machines ripping, pushing soil	Low	High	High	High	High			
Likely	snigging/light surface skim over distance	Low	High	High	High	High			
Possible	installing posts, exploration drilling	Low	Moderate	High	High	High			
Unlikely	driving with rubber tyres	Low	Moderate	Moderate	High	High			
Very unlikely	walking	Low	Low	Low	Moderate	Moderate			

#### **Step 5**: Can the RISK be reduced by altering the activity or conditions?

If the risk rating is 'High' consideration should be given to:

- · Cancelling the activity which avoids the risk; or
- Postponing the activity until conditions are dry for activities scheduled during moist or wet conditions.

If cancelling or postponing is not possible the activity should be re-assessed to determine if the risk can be reduced by altering some of the parameters of the activity. For example, tyred machinery generally causes less soil disturbance and are easier to clean, compared to tracked machines which cause more damage and pick up soil in the cleats which is hard to remove. Refer to the appendices for further guidance on reducing risk associated with an activity.

FEM079

### Step 6: Determine requirements based on RISK rating

Tick the box adjacent to the RISK rating of the activity as determined by the risk table.

High	<ul> <li>Complete Part C based on valid comprehensive dieback interpretation with Regional Manager (or delegate) approval before implementation, and sign-off after close-out</li> <li>Green Card training¹ for all proponents and contractors involved in activity</li> </ul>	
Moderate	<ul> <li>Complete Part C based on valid comprehensive dieback interpretation OR conditional dieback occurrence information with Regional Manager (or delegate) approval before implementation, and sign-off after close-out</li> <li>Green Card training¹ for proponent and contractors involved in activity</li> </ul>	
Low	<ul> <li>Part C not required. Activity can proceed using basic dieback management</li> <li>Green Card training<sup>1</sup> for all proponents and contractors involved in activity</li> </ul>	

<sup>&</sup>lt;sup>1</sup> Green Card training is mandatory for nominated departmental staff

#### Step 7: Risk Assessment sign-off

	Full Name	Position	Signature	Date
Risk Assessment conducted by:				
Risk Assessment checked by: (Regional Manager or delegate)
