

Dieback Detector Dog Handlers Contact Information

Dieback detector dogs are specially trained to detect the presence of *Phytophthora cinnamomi*.

Dieback detector dogs can be deployed across Australia to support dieback detection and management. When engaging handler-dog teams, proponents should discuss their specific requirements to ensure compliance with relevant policy, procedure and site requirements.

In Western Australia, DBCA works with handlers to develop an enabling operational and policy framework that aligns with the department's established processes, procedures and standards.
